## INTRODUCTION

Stainless steel tie wire has multiple applications in daily life.

Type 304 is the most common grade for tie wire. While Type 316 is preferred when more corrosion resistance is desired. By using stainless steel tie wire, one can avoid the troublesome work of frequent replacement with the benefit of a long service life.

Our tie wire will provide you with a smooth clean surface, uniform soft temper and with excellent workability.

## APPLICATION

Fruit and vegetable garden wattles, protection wattled walls, tying isolation around piping, fastening cable.
